FALL BULBS

DARWIN TULIPS

Darwin Tulips are more popular today than any other class. They are distinguished by their bright, clear colors, tall sturdy stems and large cup-shaped flowers. They bloom two or three weeks after the Early Tulips, their blooming season overlapping that of the late or Cottage Tulips.

There is scarcely another spring-flowering bulb to rival the Darwins in bedding work, for it is there that the stately, noble and dignified character of the plants gains fullest expression.

FRUIT TREES

Caliper governs in the grading of all fruit trees. Heights given are averages and only approximate. Some shorter growing varieties will fail to make heights specified.

On account of the drought, the larger sizes of all fruit trees will not be plentiful. There is a definite shortage of sweet cherries, pears, plums and dwarf fruit trees in all sizes.
